

SmartPlan 1.5 Version Notes

- Added support for Site Licenses
- Fixed defects

Version 1.4.1

- Changed measure area lengths to not include the length between the first point and last point entered
- Fixed defects

Version 1.4

- Automatic local saving of user-added data (photos, notes, tracks, measures)
- Visibility control and deletion of user-added data on the layer list
- Enhanced multiple measure capability that includes naming, note taking, and saving to KMZ files along with photos, tracks and notes

For usage tips on the new features see [Using the New Features](#) or video examples [here](#)

Version 1.3

- Increased upload speed
- Added ability on menu to sort the File list by name, date, or project

Version 1.2.2

- Changes to support 64bit phones (Samsung Galaxy 6)
- Too large of an image can crash the deferred uploader. Limited image sizes to prevent errors.
- Fixed deferred uploader when connectivity was unavailable for more than 24 hours

Version 1.2

Added Notes feature

- Notes are similar to tracks and photos except they get their location from whatever is picked on the screen. The Notes button is underneath the photo button and remains grayed until a point is selected.
- Pressing the Notes button allows the user to enter notes via keyboard or voice. A note title is entered by entering it first and ending it with a period.
- Notes can be displayed and edited by pressing and holding on the note icon
- Notes save as part of the KMZ file like photos and tracks.

Added deferred uploader for photos and tracks that is independent of SmartPlan running

- SmartPlan does not need to be running for uploading to continue in the background. You will no longer be asked to wait for an upload to finish.
- Status of uploading can be checked at Settings-About-AGTEK Access

Update to Latest Version Prompt

- SmartPlan now checks once per day if there is an updated version and prompts the user on whether to install it if there is.
- Pressing No does not install the new version and will not prompt again that day
- Pressing Yes downloads the new version and installs it. The user does need to restart the program after the install.
- Simplified Save/Upload screen to always upload the saved tracks/photos and it disallows changing of the file extension (.kmz)
- Support added for x86 based Android tablets
- Added ability to display KMZ file with tracks and photos created by SmartPlan and SmartDirt

Version 1.1

- Improved handling of network connectivity
- Improved reliability of save-upload
- Reduced battery use
- Add min zoom out to allow user to see outlying benchmarks
- Fixed defects

Version 1.0

- First Release version
