Reveal 1.3.0 Release Notes 1/6/2026

- Units are now required when creating a new project.

- Shortcut key information has been added to the Help section for quicker and easier navigation.

MAPS:
- Update photogrammetry process to use less memory

CLEAN:
- Localize → Export Benchmarks to different formats

- Export point cloud to ADF format.

- Export ESX to AGTEK Access.

- Added a warning prompt if imported Global Control Points or Registration Areas are significantly far from the point cloud/ortho or fall outside project bound

Reveal 1.2.1.6 Release Notes 4/23/2025

- Anzu drone support

Reveal 1.2 Release Notes 2/19/2025

- Increased Maps Processing speed significantly with the greatest gains being on larger sites.

- Added ability to change the save/processing location for Reveal by pressing the Settings button in the lower left and changing the folder location. A restart of Reveal is required after that change.

- Changed the Maps to show a street map view as zoomed further out. Zooming in switches to satellite view.

- Improved speed and ease of right-clicking on the photo view during review.

- Added additional support logging options.

- Fixed occasional anomalies in registration.

- Added language support for UK English, AU English, French, German, Swedish, and Spanish.

- If Maps processing fails, reprocessing starts back up without rerunning the entire flight in some situations.

- Clean supports importing of multiple point clouds and multiple orthos together. This does assume that all imported files are already in the correct relationship to one another.
