

Built for Heavy Construction

Visit our website

Reveal Clean saves contractors time and delivers accurate results by optimizing point cloud cleaning and editing. Working with data collected from drones or laser scanners, Reveal Clean automatically classifies and removes unwanted elements from data, providing clean, exact data in a fast, simple process leveraging the power of AI. Designed specifically for the industry, Reveal Clean will get you accurate results faster than ever before.

Faster with AI

Using Artificial Intelligence (AI), Reveal Clean recognizes objects on your job site and organizes them into groups, such as vehicles, material stockpiles, ground, and vegetation. Users can simply remove each group, providing a clear picture of the job site and the bare ground. AGTEK's Reveal Clean features simple guided workflows and rich 3D visualization combined with orthomosaic and mapping views, bringing your data to life.

Collaborate Smarter

Reveal Clean's analytics are easy to understand and shareable. Your optimized data can be sent directly to AGTEK's Gradework, or exported to other software solutions, allowing the teams in the field and the office to understand project volumes, work progress, and productivity with confidence. Export the files to your field crews, project managers, or engineering team to ensure that everyone is working with the most accurate data on all your projects.
