

Reveal Cloud - Turn project data into shared confidence

In construction, speed and certainty win work. Reveal Cloud gives teams instant, shared visibility into models, surfaces, and progress so decisions happen faster, conversations are clearer, and everyone stays aligned from bid through delivery.

Visit our website

One platform. One source of truth.

Reveal Cloud is a web-based collaboration and reporting platform that brings AGTEK data together in a secure, true 3D environment. Instead of emailing large files or relying on screenshots, teams can share live project data with internal and external stakeholders, anytime, anywhere, on any device.

Collaborate without friction

Built around a timeline-centric view of the job, Reveal Cloud makes it easy to compare surfaces and project states over time. Progress, change, and impact become immediately visible, reducing guesswork, eliminating misalignment, and keeping estimating, operations, and management on the same page. With seamless integration to AGTEK desktop and mobile workflows, Reveal Cloud connects the field, office, and stakeholders without disrupting how data is created or controlled while unlocking cloud-based visibility where it matters most.

Reporting that tells the story of the job

Reveal Cloud turns collaboration into clear, actionable reporting. Publish project progress, surface changes, and quantities to support internal reviews, executive updates, change management and stakeholder communication.

Reveal Cloud's graphical reports turn complex project data into instant clarity, giving teams the ability to see progress, risk, and change at a glance rather than hunting through spreadsheets. With interactive charts, users can filter data and drill down from high-level summaries into the underlying quantities that matter. This means faster answers and more confident decisions, ensuring everyone is working from the same facts, backed by the same data.

Built to win more work—and deliver it better

Reveal Cloud transforms AGTEK data into a living project intelligence system, driving faster alignment, stronger reporting, and greater confidence at every stage of the project lifecycle. The result--teams that win more work and execute with clarity.
