SmartDirt Mobile App Leverages Today's Smartphones and Tablets

SmartDirt provides a new level of processing power and 3D graphical information to the team making quick decisions on the ground—so they get the fast answers they need to keep the job moving.

Get Answers on the Move

SmartDirt shows cut-fill and elevation wherever you're standing based upon your takeoff, latest drone topo, or the GPS model guiding your machines. It communicates grade and inspects models with 3D visualizations that move with you as you move across the site.

Real-time 3-D in the Palm of your Hand

Real-time 3D feature ensures that the project teams always know where they stand, increasing transparency, team collaboration, project efficiency, and financial predictability. It allows users to capture jobsite conditions, track progress and monitor the quantity of earth moved effectively.

Documentation Made Easy

The app makes it easy to document progress with photos, notes and tracks that can be shared with the rest of the team in a convenient Google Earth file format. SmartDirt comes as a facility license which means that everyone who needs it can use it.

Features & Benefits

- 3D graphical job site information displayed on your smartphone
- See cut/fill information where you are standing
- Calculate balanced areas in the field
- Document progress with photos and notes
- Easily share data with your team
