SmartPlan: Construction Plan Takeoff Software

A cloud-connected mobile application that leverages geo-referenced 4D output on your job site, making it an indispensable tool for project managers and estimators.

Site Plans in the Palm of Your Hands

Walk your site with your cut-fill grid map, plan set, and takeoff quantities mapped into your mobile device for on-site navigation using the GPS positioning capability built into your Apple or Android device. Without stakes, SmartPlan guides you in closely approximating the locations of grading limits, balance areas, pad corners, slope toes, daylight lines and other plan features.

Project Planning & Management

The interoperability of SmartPlan with other AGTEK solutions makes it a cost-effective, reliable, and robust tool. This scalable software can help users save time, reduce costs, and improve their overall operational efficiency, making it highly useful across various construction industry domains.

Record and Measure

Use SmartPlan to record and measure your tracks as you drive or measure areas and lengths to document completed work. Record milestones and items of interest with SmartPlan's time-stamped photos. SmartPlan's dirt-simple data files go to and from the office via the Cloud and display directly on Google Earth.

Features & Benefits

- Walk your site with a geo-referenced plan set
- Earthwork and materials takeoff mapped to your device
- Simple on-screen controls to select regions
- Record your tracks as you map locations
- Use the camera to record site photos and send back to office
