

AI-powered plan preparation for faster, smarter takeoffs

Visit our website

Reveal Transform revolutionizes how heavy construction teams turn PDF plan sets into clean, structured digital data. Purpose-built for takeoff technicians, estimators, project engineers, and model builders, it replaces hours of manual cleanup with guided automation, delivering accuracy, speed, and consistency from bid to build.

AI-driven plan reconstruction

Turn disjointed PDF sheets into clean, structured linework. Transform identifies, snaps, joins, aligns, and classifies plan elements, letting teams focus on decisions, not data cleanup.

Seamless integration with AGTEK workflows

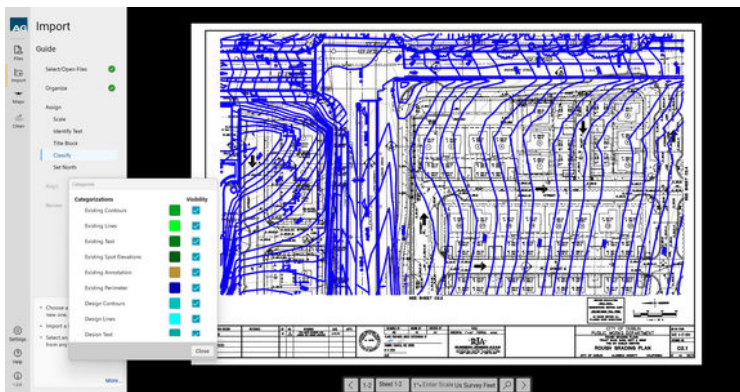

Export clean, ready-to-use data to Gradework for rapid takeoff creation, accurate modeling, and improved production tracking. Consistent digital foundations help teams accelerate bids, reduce rework, and collaborate with confidence.

Intelligent text extraction and conversion

Convert embedded plan text into usable, actionable data such as spot elevations, contour labels and sheet details. This increases takeoff accuracy and saves significant time during early project review and quantity extraction.

Smart sheet organization and georeferencing

Reveal Transform works on all sheets simultaneously, grouping sheets by type, rotating, and aligns them to real-world coordinates, enabling cleaner more efficient workflows and a seamless handoff to Gradework and other downstream tools.

Reveal Transform empowers construction teams to win more work, deliver more accurate estimates, and standardize data preparation across projects. Faster bids, cleaner data, and tighter workflow integration mean less friction and more predictable outcomes at every stage of the job.
